ADAM ZIKRY

Computer Science Graduate | Junior
Software & Game Developer
+6010 2437088 | admzkry9@gmail.com | LinkedIn

PROFFESIONAL SUMMARY

Fresh graduate game developer with a strong foundation in Algorithm and interactive systems. Proficient in Python, C#, C++, and JavaScript, with a focus on programming ideas into functional gameplay systems. curiosity-driven approach to solving technical challenges and deliver high interactive models.

TECHNICAL SKILLS

Programming Languages : Python, C#, C++, JavaScript
Frontend & Frameworks : ReactJS
Databases & Platforms : SQL, Visual Studio Code, Intellij IDE
Platforms: Library : NumPy
Engines Used : Unity, Godot, Scratch
Others : people management, excellent communication, Video Editing

PROFESSIONAL EXPERIENCE

Computer Science Project Manager **Jul 2022 – Feb 2024**

- Assisted lecturers in delivering course material, helping students understand core programming concepts and assignments.
- Guided students through debugging processes and best coding practices across multiple languages.
- Coordinated and managed team-based academic projects, ensuring tasks were completed on time.
- Managing 10+ groups over the course of study.
- Facilitated communication within teams to improve collaboration and problem-solving efficiency.
- Supported the setup and troubleshooting of development environments and tools used in projects.

PROJECTS

2D oriented Interactive Story Game **Jul 2022 – Jun 2023**
University Project | Godot Engine
Developed and deployed a demo game with story driven campaign and interactive controls

- Designed and developed a 2D game from concept to completion, implementing core gameplay mechanics, player controls, and game logic using programming principles.
- Built interactive systems including collision detection, scoring, and UI elements, ensuring smooth and responsive gameplay experience.
- Debugged and optimized performance, improving game stability and reducing runtime issues through iterative testing and refinement.

Final Year Project 2D Interactive Point-and-Click Survival **Jul 2023 – Feb 2024**
University Project | Unity Engine
Developed a demo game with story driven campaign and interactive controls

- Developed a 2D navigational point-and-click game featuring exploration, environmental interaction, puzzle solving, enemy encounters, dodging and combat mechanics.
- Designed and implemented interactive gameplay systems that required players to explore environments, solve puzzles and manage encounters with hostile enemies.
- Developed enemy AI behaviour to determine **when, where and how enemies emerge to ambush the player**, creating unpredictable encounters and increasing gameplay tension.
- Studied and adapted concepts inspired by the **AI Director system in *Alien: Isolation*** to dynamically control enemy encounter timing and locations based on the player's progression and situation.
- Implemented and tested enemy behaviour, encounter triggers and gameplay interactions to create a consistent yet unpredictable player experience.
- Debugged and refined gameplay mechanics through iterative testing, improving enemy behaviour, puzzle interactions and overall game flow.

EDUCATION

Bachelor of Computer Science | Sep 2021 – Jun 2024 | University of Leicester
